FULLSTACK DEVELOPER

Senior Fullstack Developer with 8+ years of experience building scalable web and mobile applications using React, Node.js, NestJS, ASP.NET Core, and Python. Proven expertise in real-time systems, microservices architecture, and performance optimization using standardized best practices in delivering and deploying interactive products and cloud solutions that increases user engagement.

WORK EXPERIENCE

TeKnowledge • Lagos, Nigeria • 07/2026 - Present

A Professional Software expertise agency, offering technological experts and services in software engineering and IT professionals.

Senior AI Native Fullstack Developer • Full-time

Spearheaded the architecture, ideation, design, development, and deployment of multiple production enterprise projects built specifically to target organizational problems.

- **Designed and delivered a client assessment app, a two-app AI-readiness assessment platform on Azure Kubernetes (AKS)**. The platform covers questionnaires, workshops, analysis of where stakeholders disagree, AI-drafted reports and a four-eyes approval step. It runs as a separate internal staff app and an internet-facing customer app, both on Next.js and Cosmos DB, with Entra ID single sign-on. It is backed by over 670+ unit tests and 140+ end-to-end tests.
- **Built an ATS Software Solution with an AI-driven applicant tracking system and its counterpart candidate portal.**Using Azure OpenAI agents for resume parsing, screening, final analysis and bias checks, plus an AI avatar interview room on Azure Voice Live. It integrates Dynamics 365 Finance & Operations for offers.
- **Delivered InnoVerse, YNV Group's innovation-idea platform**. Covering idea submission, evaluation, prioritization and pipeline tracking.
- Managed the development life cycle of the organization secured **Procurement Application** from development stage down through user-approved test and finally to production release. Successfully integrating it with ticket creation for financing of organizational procurement.

Lafarge/ HBM • Lagos, Nigeria • 08/2025 - 07/2026

Industrial makers of building and construction materials.

Senior Software Engineer • Full-time

Led the development and deployment of multiple scalable software solutions for organizations across diverse industries, delivering customized digital systems tailored to operational and business needs.

- Streamlined organizational charts and documentation systems, enhancing employee accessibility and compliance tracking within 3 months.
- Enhanced operational efficiency by 30% within 4 months by collaborating with cross-functional teams to develop customer service management tools and real-time notifications.
- Delivered 3 mobile applications within 8 months, securing publishing approval for employee engagement,organization procurement and employee reward app that enhanced operational efficiency by 20%.

- Developed an administrative dashboard system within 4 months, enhancing operational efficiency by 30% through seamless integration with the employee management and Procurement app using React, .NET and Next.js.
- Created a comprehensive knowledge base integrated with AI chat features, significantly improving staff's ability to find information quickly and efficiently.

rentt • United Kingdom • 11/2024 - 08/2025

RENTT is an all in one multi property management system built for automating lease agreements, collecting digital signatures, rent collection, maintenance and organising tenant information.

Senior Frontend Developer • Part-time

- Led the **frontend development of a modern property and tenant management system**, creating responsive interfaces for landlords, agents, tenants, and service providers to manage listings, rental payments, maintenance requests, and lease documentation.
- Developed **smart filtering and CRUD functionalities** for property listings, maintenance services, lease terms, and tenant records, enhancing operational efficiency.
- Built **reusable, scalable React components** for multiple portals, optimizing maintainability and UI consistency across the platform.
- Developed real-time maintenance request updates with WebSockets and conditional UI rendering.
- Implemented **secure login flows, password recovery, and session handling**, alongside **real-time maintenance request updates** with conditional UI rendering for seamless property lifecycle management.

SmatVirtual • Lagos • 12/2022 - 08/2025

Betting/Gaming Provider SaaS

Full Stack Developer • Full-time

At SmatVirtual, as a fullstack engineer, was responsible for developing both interactive gaming interfaces and backend services for virtual betting products such as Tournament, Singles, Lotto, and Color. On the frontend, I built responsive and performance-optimized UIs powered by real-time WebSocket communication for smooth gameplay experiences. On the backend, I implemented REST and WebSocket APIs, integrated game logic services, and optimized request handling for low latency. I also performed DevOps tasks to improve deployment workflows and system reliability, while designing scalable architectures that supported multi-merchant platforms and live transaction processing.

- Engineered real-time player ranking displays and live result animations across all games by combining WebSocket-driven event streams with optimized backend data broadcasting for low latency performance.
- Built provider and admin dashboards end-to-end, designing intuitive frontend interfaces and implementing secure backend APIs to manage configurable commission structures, merchant onboarding, and real-time earnings analytics.
- Integrated Socket.IO event architecture across the system, developing event-driven backend services and synchronizing them with frontend state flows to support thousands of concurrent live game updates with minimal delay.
- Developed reusable and scalable frontend modules using **React, Zustand, and TailwindCSS**, while also architecting backend modules in **Nest.js/TypeScript** to improve maintainability, reduce code duplication, and increase development speed.
- Implemented a centralized **Nx-based monorepo architecture** that unified frontend, backend, shared libraries, and game modules. This improved cross-team collaboration, enabled code reuse, standardized CI/CD workflows, and accelerated deployment cycles.
- Designed and optimized REST and WebSocket APIs, integrated business logic layers for game transaction flows, and implemented caching strategies using **Redis** to improve scalability and response time.
- Developed high-performance services in **.NET (ASP.NET Core)** for computation-heavy operations such as payout calculations, leaderboard aggregation, and settlement processing, ensuring accuracy under high transaction volumes.

Erranda • Lagos • 01/2023 - 12/2024

A P2P Delivery system in Nigeria

Fullstack Developer • Part-time

As a Full Stack Developer at Erranda, I design and build scalable logistics and payment-driven web applications powering a peer-to-peer delivery system across Nigeria. I architect secure backend services, develop intuitive frontend experiences, and integrate critical financial operations to drive real business growth. My work spans authentication, role-based access systems, escrow payments, system automation, and real-time notifications—delivering reliable technology that connects delivery agents and customers seamlessly.

- Engineered a secure backend architecture using **Node.js (ES6), TypeScript, Express**, and **MongoDB**, implementing **role-based access control (RBAC)** to support multiple user types including delivery agents, clients, and admins.
- Built end-to-end authentication using **JWT refresh/access tokens** and middleware authorization, improving security and access scalability across protected routes.
- Designed and integrated a **real-time notification system** using **Socket.IO & Firebase Cloud Messaging (FCM)**, improving user engagement by **40%**.
- Developed a **secure escrow payment system** to hold funds during deliveries, increasing **successful trade completion by 30%** and building user trust.
- Integrated **Paystack** for **deposits, withdrawals, and wallet top-ups**, supporting seamless financial transactions and auto-payment settlements.
- Configured and managed **webhooks** to process asynchronous Paystack events such as payment confirmations, refunds, and failed transactions—ensuring accurate wallet updates and transaction history integrity.
- Built a **web-based Admin Dashboard** to monitor logistics operations, manage disputes, verify drivers, and enforce permissions across platform modules.

Senior Backend Developer • Part-time

- Designed and implemented core backend services using **.NET (ASP.NET Core)** and **NestJS (Node.js)** contributing to a scalable and maintainable microservice-based architecture.
- Configured and processed webhook events in response to external API updates to factor in changes to appropriate user data.
- Implemented a multi-level role-based access control system, improving user management efficiency by 40% within 4 months, ensuring secure data association and activity oversight.
- Enabled Deposit and withdrawal features for users utilizing payment gateway (Paystack).

Tech Workstations • 06/2020 - 12/2023

A technological service devlepoment company.

Lead Frontend Developer • Full-time

- Developed fully responsive landing page and waitlist submit form with google validation for the Bammby dating app (https://bammby.com)
- Implemented mobile app features such as push notifications, Biometric and Google authentication, universal deep linking for Remedy app using Es6 compatible Javascript /Typescript.
- Conducted testing of beta app releases on both Android and IOS platforms, focusing on features and functionality
- Published compiled test and final build release version of application to both Android and IOS platforms
- Presented PRs for features done in the web and mobile applications for reviews and merge
- Integrated backend APIs with frontend for consumption and rendering of data
- Ensured seamless usage of data on the web browser by optimizing web page loading speed, reducing latency and improving data caching mechanisms
- Constructed a backup full stack web application for the Remedy CV page during server downtime

- Updated & modularised old code bases to modern development standards as part of slashing operational costs

Lordwin Group • lagos • 11/2022 - 08/2023

Tech developer of online games and bets

Senior Full-Stack Developer • Part-time

- Successfully developed a mobile application with five distinct theme modes, providing users with a diverse and personalized visual experience.
- Improved system performance by 40% through orchestrating a system of loosely coupled backend microservices in Nestjs, resulting in a more responsive and efficient gaming platform for smatvirtual.com
- Successfully tested and deployed microservices in Kubernetes clusters on AWS, Azure, Google Cloud, and Digital Ocean, and configured load balancers to expose them for external use, resulting in a 20% increase in system scalability and flexibility, leading to improved business agility and competitiveness.
- Developed a web application within 6 months to serve admins, merchants, users for smatvirtual platform and dice.ng gaming platform using Es6 compatible javascript and typescript.

Impact Apps • lagos • 11/2018 - 01/2020

Tech application developing company

FULLSTACK DEVELOPER • Part-time

- Successfully implemented a cross-platform mobile application using React Native, showcasing versatility in iOS and Android development.
- Implemented OAuth2 for secure and seamless user authentication for social accounts(twitter, Instagram,tiktok) , prioritizing user privacy and data protection.
- Utilized Socket.IO to establish real-time communication, enabling dynamic updates and live interactions within the application.
- Demonstrated expertise in iOS development using Xcode, ensuring a polished and native-like user experience on Apple devices

EDUCATION

Higher National Diploma

Moshood Abiola Polytechnic • Abeokuta, Ogun, Nigeria • 11/2014 - 01/2020

Cloud Development • 09/2022 - 11/2022

End Web Development

University Of Science And Technology • 10/2021 - 12/2021

CERTIFICATIONS

Frontend Development with React • 10/2021 - 12/2021

University of Science and Technology Hong Kong

Cloud Development With AWS • 08/2022 - 11/2022

UDACITY/ALX

Claude Code and Agentic Operations • 06/2026 - 07/2026

Anthropic (Claude)

PROJECTS

LAP Procurement App
Lafarge Huaxin

Lafarge Organization Procurement Mobile Application for organization items procurement and automated tracking system. https://apps.apple.com/us/app/lap-smartprocurement/id6762128563

smatvirtual • 01/2024 - 03/2024
Smat Virtual

A Gaming Company creating games for betting platforms
